

## Day 4 -Power Bi Class

Topics that I learned from the today class

1. Target
2. Drill Down and Drill Through
3. Slicer

### Target :

Target is used to set the particular goal level to the values and we can set multiple values to the target.

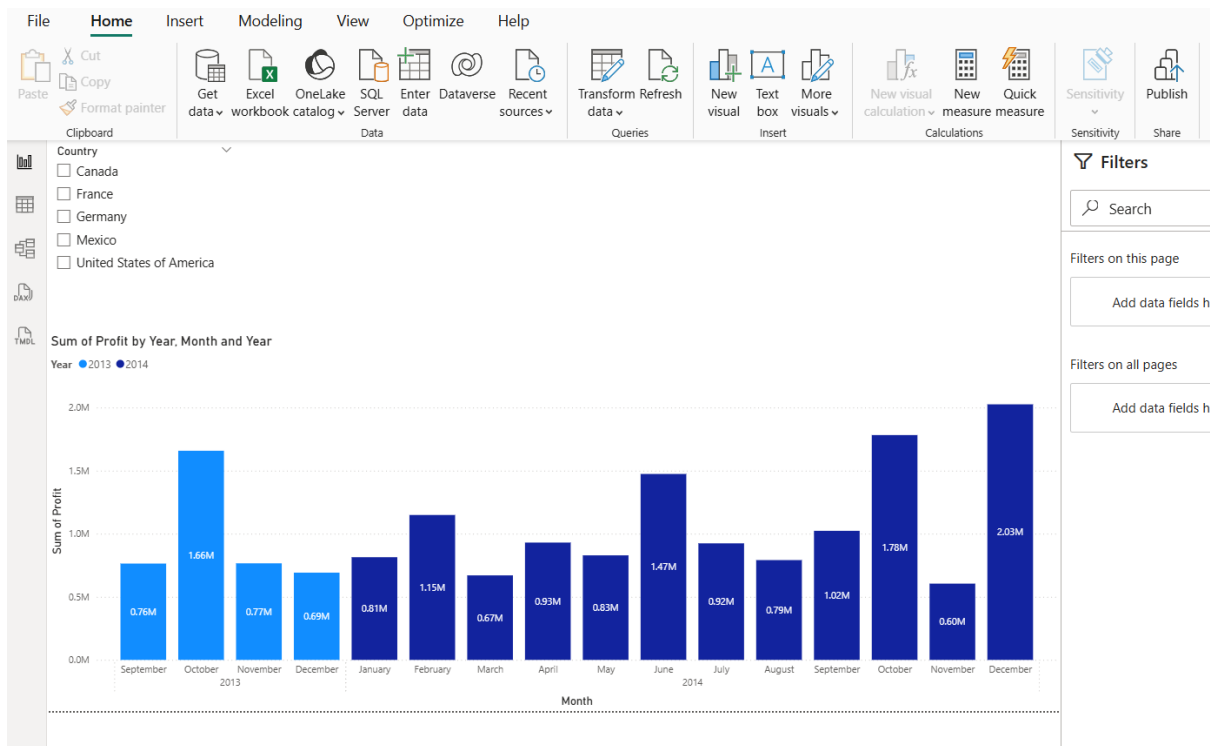

## Drill Down and Drill Through :

### Drill Down

You can investigate data in further detail by “drilling down” into a particular dimension or hierarchy using Power BI’s drill-down capability. Drilling down enlarges the view to expose the underlying details of a specific data point or category.

### Drill Through:

Power BI’s drill-through capability lets you access a single report page or dashboard that offers additional in-depth details about a particular data point or object. This is especially helpful if you need to obtain more context or analysis or if you need to examine data that isn’t immediately relevant to the current hierarchy.

## Slicer:

I used country wise slicer for sum the profit based on the month and years
